TECHNICAL SKILLS

Languages: TypeScript, Python, Go (Golang), SQL, JavaScript, HTML/CSS.

Frameworks: React.js, Next.js, Node.js, React Native (Android/iOS), Express.js/Fastify.js, Shadcn UI, Material UI.

Platforms & Services: AWS, GCP, Vercel, Supabase, Neon, Cloudflare, Convex, Stripe, Git, Docker, Clerk, Polar.

Databases & APIs: PostgreSQL, MongoDB, MySQL, tRPC, gRPC, Protobufs, Prisma, Drizzle, Typesense.

Core Concepts: Data Structures and Algorithms, Distributed Systems, API Design, Caching, Scalability, Consistency.

EXPERIENCE

Software Engineer

November 2023 – Present

Black Wallet LTD - Avalon Project

Remote, IN (HQ - USA)

- Engineered cryptocurrency DEX platform, supporting multi-chain operations across Solana and Ethereum.
- Optimized database performance through strategic Prisma ORM indexing and connection pooling, improving query response times by 50% for portfolio aggregation across 1,000+ token balances and transaction records.
- Implemented real-time swap quote engine with response times under 500ms through RTK Query caching and optimized API calls, supporting multi-chain token swaps across Solana and Ethereum with 30-second quote refresh cycles.

Software Engineer

April 2025 – September 2025

Cofiato - 2careAI Project

Remote, IN (HQ - IN)

- Led full-stack development of telemedicine appointment booking system with Google Calendar integration, serving 100+ medical POCs and 500+ patients monthly.
- Built AI-powered clinical check-in workflows using multi-LLM architecture (GPT-4, Claude, Gemini), reducing documentation time by 50%.
- Architected OAuth 2.0 authentication flow and automatic Meet link generation, reducing manual scheduling overhead by 60%.

Software Engineer

April 2024 – Present

Manabu Method - NGO Project (Hourly Contract)

Remote, IN (HQ - USA)

- Led full-stack development of offline-first humanitarian field data platform, enabling 3 user roles to collect and sync location data, needs assessments, and media files across disconnected regions.
- Engineered conflict-free data synchronization engine handling incremental uploads/downloads with change tracking for 6 data models, reducing field worker data entry time by 70% through offline-first architecture.
- Architected serverless AWS infrastructure using Terraform, Lambda, API Gateway, and RDS, reducing deployment costs by 40% while supporting 1,000+ location records and 10GB+ media storage.

Software Engineer Intern

July 2023 – August 2023

BitCot Technologies - Python Team

Indore, IN (HQ - USA)

- Developed AI chatbot integrating OpenAI/LangChain with FastAPI, implementing S3-based data persistence for conversation continuity.

SAAS PRODUCTS

Software Engineer

Present

Clear-to-Hire

Remote, IN

- Built Clear-To-Hire, a hiring compliance SaaS using Next.js, Go (Golang), gRPC, and AWS (Terraform, EKS), automating international employment contracts and reducing compliance costs by 98% (\$10K+ to \$99).

Software Engineer

Present

Field-Intel

Remote, IN

- Engineered Field-Intel, a production-grade voice-to-CRM SaaS using TypeScript monorepo (Next.js, Fastify, React Native), implementing AI-powered transcription (OpenAI Whisper), fuzzy contact matching with 90% accuracy, HubSpot OAuth integration with AES-256 token encryption, and exponential backoff retry logic with dead-letter queues for 99.9% sync reliability.

EDUCATION

Prestige Institute of Engineering Management and Research

August 2019 – May 2023

Bachelor of Technology in Mechanical Engineering

Indore, India
